

EXECUTIVE SUMMARY

Benard Onyango Omoga

Data Analyst | IT Specialist | Web Developer | Software Engineer

[About](#)[Projects](#)[Skills](#)[Contact](#)

About Me

I am an IT professional specializing in data analysis, software development, and web applications. I focus on turning raw data and business requirements into practical digital solutions that improve efficiency and decision-making.

With strong experience in Python, SQL, Power BI, and modern web technologies, I build data-driven systems, interactive dashboards, and scalable web applications. This portfolio highlights my projects across data, IT systems, software engineering, and web development.

My Projects

FNP Sales Trends Analysis Dashboard | Excel Business Intelligence Project

Developed an interactive sales analysis dashboard to track and analyze key performance metrics. Features trend analysis, revenue breakdown, product performance, delivery efficiency, and customer satisfaction insights. The project utilized Excel charts, PivotTables, and slicers to transform raw data into actionable insights for business decision-making and forecasting.

Retail Sales & Profit Management System | Python, Streamlit & SQLite

Developed a retail store sales and inventory management system for small businesses using Python, Streamlit, and SQLite. The application manages products, sales, profit/loss tracking, stock updates, transaction processing, and inventory alerts through a simple and interactive dashboard. This project showcases the end-to-end workflow from product addition to sales processing and reporting, optimized for business SMS operations.

Professional Data & IT Portfolio Website

This project involved the design, development, and deployment of a professional portfolio website to showcase my expertise, projects, technical skills, and professional achievements as a Data Analyst, IT Specialist, Software Engineer, and Web Developer. The portfolio serves as a centralized online platform where potential employers, clients, collaborators, and industry professionals can explore my work, access project documentation, review my technical capabilities, and connect with me through multiple professional channels. The website is publicly accessible through GitHub Pages at <https://amollo1.github.io/>.

The portfolio was developed using HTML, CSS, and JavaScript to provide a modern, responsive, and user-friendly experience across desktop and mobile devices. The platform features a professional profile section, project showcase area, categorized technical skills, social media integration, downloadable CV access, and a contact form that enables direct communication with visitors. The website also integrates links to my GitHub repositories, LinkedIn profile, and YouTube channel, allowing users to explore my software development, data analytics, and educational content.

The project highlights several practical solutions I have developed, including business intelligence dashboards, data analytics projects, and software applications. Each project includes detailed descriptions, supporting documentation, and links to live demonstrations or source repositories where applicable. The portfolio is designed to continuously evolve as new projects, certifications, and professional experiences are added.

To ensure accessibility and cost-effective deployment, the website is hosted using GitHub Pages, providing reliable web hosting, version control, and seamless project updates through Git. The development process utilized modern web development practices, including responsive design principles, structured content organization, and clean user interface design.

Overall, this portfolio website serves as a digital representation of my professional journey, technical expertise, and commitment to delivering data-driven and technology-focused solutions. It provides a platform for showcasing my capabilities while creating opportunities for networking, collaboration, employment, consulting engagements, and knowledge sharing within the technology and data communities.
